RHUB Communications Unveils TurboMeeting
3.3 Web conferencing Solution

Santa Clara, CA, March 21, 2008 – RHUB Communications, Inc.
(RHUB), a premier provider of Web conferencing solutions, announced the
release of TurboMeeting Version 3.3. This new release represents a milestone
for the award winning TurboMeeting software with the launch of international
language support and recording. TurboMeeting 3.3 now supports five languages
for user convenience: English, Spanish, Traditional Chinese, Simplified
Chinese and Japanese. RHUB's advanced record capability makes it easy for
the user to record both computer screen and audio during a meeting.

All RHUB appliances will automatically update with this release. No IT
support is required for the update.
The key new features of 3.3 include:

International language support – A user who has their PC set to
any of the five languages supported will automatically see all the
TurboMeeting user interface in his native language. Languages include:

English
Spanish
Traditional Chinese
Simplified Chinese

Japanese

Record with built-in player – Each PC user can record the meeting
session on their computer. Audio picked up by the computer microphone is
also recorded and synchronized with the screen update. RHUB proprietary
recording format yields much greater compression efficiency than standard
recording formats. Unlike other competitors using standard recording formats
that sometimes can record only part of the meeting presenter screens thus
miss some critical information, the RHUB player can view the whole or any
part of the meeting presenter screen during playing and all information is
captured. RHUB's recorder only records the meeting presenter screen without
any insertion of attendees' local screens thus eliminating confusion. The
voice quality is crystal clear.
The single executable record file includes the embedded player. A user
just needs to click on the file and the player starts. It does not rely on
any third-party players. Hosting online registration for resellers –
Selected resellers can now conduct online campaigns and invite their
potential customers to register at their TurboMeeting appliance for
evaluation. Resellers can retrieve online registration anytime to generate
sales leads. Macintosh OS 10.5 support – The TurboMeeting client software is
now compatible with the newest Macintosh operating system.
Publish meeting calendar – Meeting hosts can now indicate which
meeting is to be published for public access. The TurboMeeting appliance
provides a URL for the appliance owner to display those publishable meetings
in either HTML or XML format. An attendee can simply click on a meeting link
on a public meeting calendar and join.

Hide attendee list – The host of a meeting can choose to have attendee lists
display or not on attendees' meeting control panel.
Administrator control enhanced – The system administrator can now
terminate any on-going meeting when it is desired.
Enhanced branding – In addition to the ability to brand the
meeting homepage with company logo and name, the appliance owner can set a
promotional URL of his marketing web page, which will be viewed by meeting
attendees when a meeting ends.

New TurboMeeting 200 Review – CRNTV recently reviewed the TurboMeeting 200 Web conferencing appliance and rated five stars for TurboMeeting 200. The review is available at:
