

Centron Diesel Fuel Additive produces dramatic reductions in Nitrous Oxide and Hydrocarbon Emissions

“The test confirmed that both Nitrous Oxide (NOx) and Hydrocarbons (HC) are reduced significantly. Using Centron NOx reductions were 38% at idle and 66% under load. HC reductions were 23% at idle and 42% under load.”

Oct. 2, 2008 - [PRLog](#) -- Centron Diesel Fuel Additive known for its fuel economy performance is also receiving high marks for reducing toxic exhaust emissions. In July 2008, Claude Travis & Associates a recognized Fleet Consultant and SAE/TMC Test Specialist performed an SAE test in connection with Centron Diesel Fuel Additive and its effect on emissions. The test was performed on a 450-horsepower Cummins diesel tractor.

“The test confirmed that both Nitrous Oxide (NOx) and Hydrocarbons (HC) are reduced significantly. Using Centron NOx reductions were 38% at idle and 66% under load. HC reductions were 23% at idle and 42% under load.” Upon completion of the test Claude Travis - Past Chairman Joint SAE/TMC Truck & Bus In-Service Test Procedure Committee stated “We have undertaken many tests before as we have never seen emission reductions as dramatic as these”

Blowby was also measured. “Prior to Centron being used in the diesel engine the tractor showed a blowby reading of 8. After Centron was used in this same tractor, the blowby reading was reduced to 6. These readings were confirmed by the use of a dynamometer test. A low blowby reading indicates that the engine is running efficiently and harmful emissions are reduced.”

Mr. Travis went on to state “In our experience, we have never seen as dramatic effect on blowby as in the SAE test we conducted when Centron was added to the diesel fuel in the prescribed manner.”

Centron considered by many as the best all around diesel fuel additive in the market is being used by major fleets and is proven to increase MPG by 10%-20%, reduce toxic exhaust emissions, lower maintenance costs and increase equipment life.

An “All in One” diesel fuel additive Centron provides a wide range of performance, preventative maintenance and environmental benefits. These benefits include.

- Proven to increase fuel economy by 10% - 20%
- Proven to reduce toxic exhaust emissions by 50% or more
- Provides Top-Oil for lubrication of pumps, injectors & vital engine parts
- Acts as a detergent, cleaning fuel injectors and the fuel system
- Acts as a water emulsifier and algaecide ensuring the quality of your fuel
- Acts as a fuel stabilizer
- Increases cetane by up to 8 point
- Increases horsepower by 5%
- Proven to lower maintenance cost & increase asset life
- ISO 9002 compliant - Blended by Brenntag world leader in chemical blending
- Covered by \$1 million Product Liability with zero claims in 7 years
- Immediate Fuel Savings with ROI of 400% - 1000%
- At just \$0.10 per treated gallon Centron pays for itself with just 2% fuel savings

Centron has been servicing fleets and fuel dependent businesses since 2001.
