

New Devices to Ensure Personal Safety and Freedoms Become Available to the Everyday Consumer

Video and audio recording equipment that can fit easily and inconspicuously inside the automobile, home or office can make a tremendous difference in the fight to prove your innocence.

Jan. 20, 2009 - [PRLog](#) -- Stories abound of people involved in situations like a car accident, being stopped by the police or confrontations with enraged drivers. Aside from the initial shock of these events the frustration that occurs because there are no witnesses to the injustice of it all leaves a person wishing they had something that could prove their innocence.

During such occasions it is not always convenient or prudent to whip out the video camera and try to record what's going on. The road rage maniac isn't going to like it and it will most likely inspire an even angrier response. The police officer will certainly take it as an affront to his authority even though it is your "right" to record, the officer will most likely try to confiscate the camera while you get to take a trip "down town".

The solution is actually simple, practical and doesn't involve having a second car follow you around all the time or taking years of martial arts classes. Its spy equipment (<http://spybase.com/>) or more precisely, personal security and surveillance devices for protection of person, property and Constitutional rights. A picture is worth a thousand words but quality video recordings of the situation can be of immense value not just monetarily but for personal freedoms. The people at SpyBase BRD Security Product Inc. say it the best:

You have the right to know because what you don't know can hurt you."

Along these lines is the need for everyday citizens to become increasingly aware that to document serious offenses while on the open road or inside your home or office is the only true protection against future harm and litigation. Video and audio recording equipment that can fit easily and inconspicuously inside the automobile, home or office can make a tremendous difference in the fight to prove your innocence.

SpyBase, (www.spybase.com), located in Torrance, California, has been in the surveillance and personal protection business since 1989 and offers a wide range of equipment and surveillance gear for the every occasion and use. Everything from video recorders, cameras, mini transmitters, hidden cameras, tasers, telephone security devices and so much more is available at competitive prices.

One such device for the car is the Automated Driving Surveillance Recorder with GPS system. This personal video recording camera is designed with an Automatic G-Sensor that records 10 seconds before an accident and 30 seconds after the event. Its internal 3D sensor can detect speed, breaking, acceleration and impact.

This is the only video car camera that has a built – in GPS location logger that provides complete surveillance records that import right into Google Earth. The playback can be done on any PC and allows the user to view the video simultaneously with the GPS data. The video equipment gives pertinent information regarding date, time and the location of the vehicle. The Automated Driving Surveillance Recorder equipped gps vehicle tracking surveillance (<http://www.spybase.com/gps-vehicle-hostage-tracking-perso...>) has the ability to record video while still driving or if the car is stationary. Even without an accident the owners can manually switch on the device to record events outside the vehicle just by pushing the emergency button.

With over 6,420,000 automobile accidents in the United States last year alone as well as an untold number of cases of people being illegally stopped by the cops or just being hassled while driving, it makes sense to have video surveillance equipment (<http://www.spybase.com/hidden-spy-cameras-digital-rec-wir...>) that can record events giving citizens the ability to expose the truth, protect their rights and prevent unfair lawsuits and insurance claims.

Spybase.com can be accessed on line or you can call them direct at 310-316-1586 and you won't even need to use a secure line, although it's always a good idea.

--- End ---
