Dear Friends:

OTC: SLPO Super Lattice Power currently trading around 3 cents is set to explode.

<http://www.superlatticepower.com/>

SLPO has traded at a high of 35 cents in the past. SLPO has traded close to 2 million in volume ONE HOUR before the markets closed Friday. SLPO will have a great kick start when markets open Monday investors just started to discover SLPO.

SLPO is a Lithium Ion battery company which has developed a cathode material for Lithium Ion batteries and thermal management system for EV battery packs, with a capacity nearly 1.5 times greater than the present commercially available cathode materials.

It was announced last year Obama has granted \$2.4 billion in stimulus grants to jump-start the electric-vehicle industry! With \$1.5 billion of these funds going to advanced battery projects... SLPO could be in the right place at the perfect time!

The Chevy Volt is expected to launch in November of 2010 and I believe Wall Street could start to go crazy in the months ahead about electric-vehicle plays, especially companies like SLPO that are developing battery technology! SLPO is developing batteries for electric as well as hybrid vehicles

Right now the big craze is lithium batteries. Everything runs on them. Advancements in the field is changing everything we use.

All the electric cars run on some sort lithium battery.

With their technology, SLPO is developing power to convert scooters, bicycles, mopeds, motorcycles, cars and even homes and businesses into zero-emission, lithium-powered vehicles and facilities.

How will SLPO do this

Cathode materials are the most expensive part of lithium ion batteries. Cathode materials are found in different crystalline structures like layered structure, spinel structure, olivine structure and recently a series of superlattice structures.

SLPO has taken a step ahead to pioneer Superlattice Cathode Material for the use in Lithium Ion Rechargeable.
