Sept. 29, 2010 - [PRLog](#) -- ASPHostCentral.com, a premier provider in advanced Windows and ASP.NET hosting service, proudly announces the availability of the latest ASP.NET MVC 3 Framework on our newest Windows Server 2008 Hosting Platform.

You can start hosting your ASP.NET MVC 3 site on our environment from as just low as \$4.99/month only. For more details about this product, please visit our product page at <http://www.asphostcentral.com/ASPNET-MVC-Hosting.aspx>

"ASP.NET MVC 3 is a framework for developing highly testable and maintainable Web applications by leveraging the Model-View-Controller (MVC) pattern. The framework encourages developers to maintain a clear separation of concerns among the responsibilities of the application – the UI logic using the view, user-input handling using the controller, and the domain logic using the model. ASP.NET MVC applications are easily testable using techniques such as test-driven development (TDD)," said Tom Heinrich, General Manager of ASPHostCentral.

"The installation package includes templates and tools for Visual Studio 2010 to increase productivity when writing ASP.NET MVC applications. For example, the Add View dialog box takes advantage of customizable code generation (T4) templates to generate a view based on a model object. The default project template allows the developer to automatically hook up a unit-test project that is associated with the ASP.NET MVC application. Because the ASP.NET MVC framework is built on ASP.NET 4, developers can take advantage of existing ASP.NET features like authentication and authorization, profile settings, localization, and so on," said ASPHostCentral.com Senior Support Specialist, Ryan Dalgish.

Some of the highlight features of our ASP.NET MVC 3 Hosting Plans:

- Support ASP.NET MVC 1 and ASP.NET MVC 2
- Supports ASP.NET 4.0
- Supports Visual Studio 2010
- Support SQL Server 2008 R2
- Support Windows Server 2008 R2
- and many more...
