

A fire in winter - Monster Beats by dr. dre studio headphones

What kind of headphones on earth is just good? There are three simple rules for reference, including good sound, beautiful appearance and comfortable enough, if one can fit two of them, it can be seen as the top grade. But Monster Beats studio is...

Dec. 21, 2010 - [PRLog](#) -- Despite Monster Beats headphones only has a history of more than two years, but no brand dare to treat Monster lightly, because of the first paragraph headset Studio, Monster become well-known, and now it is the second on sales headset brand in America, which has more than ten styles famous products. Meanwhile, the Monster headphones is also the representation of fashionable type headset, beheld by the rap godfather Dr. Dre's, and musical platform thunder mother Lady Gaga participate in the design, even the Apple corporation do highly recommend, moreover, there are lots of stars in America's entertainment industry and athletes have Monster headsets, if you are still asking which headset Lady Gaga or Bryant are wearing, you are already out.

What kind of headphones on earth is just good? There are three simple rules for reference, including good sound, beautiful appearance and comfortable enough, if one can fit two of them, it can be seen as the top grade, and the Monster latest headset Beats by Dr. Dre studio is such a rare product because of meeting the above three principles of products at the same time, after you tried it only one time, it basically will give you a deep and unforgettable impression, just like restore the lost music language.

Headphones is developed by legendary musician and recording producer Beats Master Dr. Dre, Interscope Geffen A&M chairman Jimmy Iovine together with Monster company for three years, so take its called Beats by Dr. Dre, the characteristic is having high definition, strong bass and high-power output to restore all kinds of sound the musicians and recording producers manufactured in professional studio. Beats by Dr. Dre adopt 40mm unit and digital amplifier, make earphone can replayed intensive sound, meticulous treble and vigorous low-frequency, then manufacture a noise isolation technology through electronic device, recur recording indoor sound insulation effect, listening to the any tiny music change. Besides, Beats by Dr. Dre use very thick ear's cover, strengthen the comfort when wearing. In addition, we attach two Monster headset wire randomly, one is iSoniTalk implanted into the microphone and incoming telegram answer keys, can cooperate with the iPhone, BlackBerry and other music cell phones.

Introduce first, the United States Monster which is said "Monster" early, is a widely used large civil and professional wire brand with good catholicity and reliable performance, many products are popular with low price but good quality, excellent craft and stable performance. This earphone is developed by Grammy winner Dr. Dre. Together with the Monster audio expert team, using advanced loudspeaker design and dynamic isolation technology isolated noise, can deliver higher definition music, proprietary driver technology is connected by Monster wire.

Inserting headphones, the music play immediately, the first feeling is pure. From the headset's shape, you must can not imagine the voice is such clear, transparent, details are in focus, and the positioning is very accurate, it won't be vague or confusion even under great dynamic, especially when hearing some crazy drum, you can clearly distinguish each drum percussion position, space stereo sense is very strong, SA5000 can not give me the feeling, and listening to some live recording will make you have unprecedented feeling. Vocals is very outstanding, which is very obvious that it is before the musical instrument, both male and female voice are remarkable, low-frequency feeling is enough, submergence is very deep, the speed of recycling descend fairly fast, it is very enjoyable to listen to pop, rock, JAZZ and

crazy HIPHOP, moreover, string and piano performance are all very good, sound field also quite big, estimates that listening to classical is fine. Demand for front-end is not high, performance under X-Fi and D50, flying saucers and IPC are all very good, very easy to push, after all, its positioning is carry-on headphone. Effect of noise reduction is very good, I didn't hear that my dad at my door outside knocking knocked about until with the last strength in taken, then I put Z5500 open to ordinary, listening to music volume, then wearing your headsets listen, also did not hear the voice of Z5500. The B on the right of the earphone is a button, will mute when pressed, and a similar effect like PTH of Shure, can magnify the voice nearby, the design is very convenient. Besides this street lead high when wearing out, the appearance is very fucking, especially the monster line, red flaming, work is very good. The recording technician is Monster series headset's top model, the greatest characteristic of the headset is dazzle cool appearance, black specular shell technology is extremely dazzling, and low frequency is strong, like flooding came back, dynamic range is wide. The recording technician headphones also with noise reduction devices inside that can isolate outside noise through active noise reduction, which is very practical. Now the price of this kind of headphones in hotsalemart.com is just \$169, we recommend it to you who likes fierce dynamic pop music for key reference.

This kind of headphone is very perfection as carry-on equipment with lots of details, pure voice, the prominent voices, shock of low frequency and is very easy to drive, sound doesn't have obvious shortcoming, makes me very surprised.

Headphones market is not easy to manage, this is the common sense of the world manufacturers, but on the contrary, although Monster has decades of history, but only two years of headset business, in late 2008, he is already the second native American sales brand, a large number of stars use Monster products, and a strong wind raised by Monster.

You may not know Sennheiser and the triangle, but if you didn't know Monster beats until now, then you completely behind The Times,

when Kobe Bryant are fined \$10,000 because of wearing a Monster Beats Studio at a press conference, and LeBron, Lady Gaga, Eason Chan and other stars are wearing headphones for the presenting on public place, as a young people nowadays, you have no excuse to ignore the existence of Monster, just like Nike.

For instance, if the Monster doesn't use numerous stars' endorsement offensive, perhaps for quite a long time he is still just a wire brand only known by enthusiasts and professional personages, however, through the fashionable and popular series of cooperation propaganda, now he doesn't need to carry forward its own brand through the traditional route any more, just Google it, and you will find that about "the headset Cobe are wearing" news can be listed with dozens of page. We think that the rise of Monster has made a good beginning for other potential manufacturer who now want to enter the row of doing headphones or earplugs business, tell everyone how on earth can make your own brand grow fast, which, of course, are built on the absolutely quality assurance as the premise.

We are very happy to see we injected some new vitality in the depressing headset market relative to others who have new technology and new products everyday, we wish this situation can maintain long-term even expansion continues, bring us more and better products.
