TORONTO - Oct. 12, 2015 - [PRLog](#) -- Learn more about Scalp Micropigmentation (SMP)

Scalp Micropigmentation (SMP) is a non-surgical procedure, which is carried out on a scalp to take care of **Thinning Hair**, balding, hair loss and scars. This procedure is only carried out by professionals who have been trained to carry out **SMP** and have the required experience. **Thinning Hair** is a problem that affects both men and women of all ages all over the globe. It is a procedure that has become quite popular these days, and Scalp Esthetica Company is the company that is well known for offering professional Thinning Hair treatment all over Toronto, Ontario.

Scalp Micropigmentation is a method that is modern, and uses needles to apply medical grade color pigment on the scalp. The color used in the Thinning Hair treatment is natural and does not fade like the color used in normal tattoo. The pigments that we use for carrying out SMP are pharmaceutical quality, and they conform to the EU Cosmetics Directive standards that were signed in the year 2008.

The pigments used in **Thinning Hair** treatments are of the highest quality, have minerals and have been dermatologically and microbiologically tested. The pigments are germ-free, do not contain any heavy metals or aromatic amines, have no type of synthetic preservatives, and are also hypoallergenic. Even though you may look at **SMP** procedure as normal tattoo, but the fact is that colors used for the normal tattoo do not undergo the same rigorous testing and regulations such as the **Thinning Hair** treatment pigments. The pigment or the color used for normal tattoo changes due to the migration and color type, and also the tissue level where the tattoo has been injected. **Thinning Hair** procedure is different, and the pigment is implanted on the top layer of the epidermis, and the color does not change at all. Once the SMP procedure has been carried out on your scalp, it can last between one and three years, and it is a good idea for you to go back for a retouch after three years, for the treatment to remain looking good.

At Scalp Esthetica, we are not in a position to determine the exact time that the Thinning Hair procedure lasts, since the longevity depends mostly on the biology of the patient, lifestyle and several factors that may

affect the procedure. Do not shy away from having a **Scalp Micropigmentation** treatment since you will not feel any pain at all. This is because the pigments are only fixed on the bottom layer of the epidermis. The Thinning Hair treatment is supposed to take no more than four hours. This is because the scalp can become irritated after this period, and the patient can experience some pain. The good news is that SMP is now being carried out in Toronto, Canada. Visit us today and get a quote that will not make you break the bank!

Don't settle for just any so called Scalp Micropigmentation clinics that ask you to travel long distances, don't have any real before or after pictures, and copy the work of others and pass them off as their own. Scalp Esthetica have their own client testimonials, pictures and videos of actual clients on their website and facebook pages, as well as as instagram. Best of all, Scalp Esthetica has client referrals, so you can speak to an actual client about their treatment and results.

Visit www.scalpesthetica.com for more information about Scalp Micropigmentation, Hair Tattoo and Scalp Tattoo treatments for Men and Women who are balding or who have thinning hair. Consultations are always FREE.
