

Does Calling Through PC Save Any Cost

The PC phone calls are made possible with the use of VoIP technology to make both international as well as domestic calls from the personal computer.

Sept. 9, 2008 - [PRLog](#) -- With the advancement in mobile technology, the mobile and telephone service has seen a drastic change. The era of mobile phone services in India started in August 1995. The call charges at that time was very high and even incoming calls were charged, making it a rich-class affair. The mobile phone services at that time was beyond the reach of common man. But its all together a new scenario today, where almost everyone in the rural and urban India is having a phone.

The entry of more and more service providers in the Indian market brought the calls tariff down, making it affordable for everyone. The new deal from service provider today provides the user lifetime incoming calls without any charges. In this deal, the users need not to recharge the phone for validity or for making and receiving calls. The user can receive calls even if the talk time balance is zero. The lifetime validity of the phone allows the user to receive call without interruption.

The slash in national and international call rates by the service provider has further established the mobile industry. All the roaming charges has been cut to the normal rates of the calls with no other service tax. The control on the call rates has been the major force to drive this sector to new height and position.

The inception of more and more advanced technology is adding up to the cheap call rates for mobile phone. The users are enjoying the low call rates from the service provider. PC to phone calling has also become cheaper. The PC phone <http://www.youtring.com/Phone.aspx> is a computer telephone designed to receive and send calls through the use of internet. It is capable of making and receiving calls to any regular phone numbers.

With the introduction of PC phone in the market, the call rates are now made even more cheaper. The users can enjoy the cheap long distance national and international calls. This technology has revolutionised the mobile industry and the service provider are facing a tough competition from the PC call. The PC call is very easy to operate and dial with fast connectivity.

The PC phone calls are made possible with the use of VoIP technology to make both international as well as domestic calls from the personal computer. The user-friendly technology of this telephony services boosted the confidence of the users, who are now comfortably making and enjoying calls. The high-end technology is making people use the PC phone calling at a rapid scale. The voice quality is very satisfying and users can enjoy the clarity with seamless connection.

This technology can be accessed from any place on the earth with great sophistication and high speed. The technology runs on the principle of converting analogue voice signals into digital voice signals forms for original sound quality. In addition to voice signals, the user can also transfer data.

The PC phone calls <http://www.youtring.com/Phone.aspx> echnology provides outstanding benefits to the users such as easy activation, online customer billing panel, customised web panel for creating and easily managing user accounts, customised online billing for end users and customised dialer for the brand.

The call rates from calling through the PC phone is certainly very low as compared to mobile call. More and more users are using this technology to make long distance national and international calls. On the other hand, mobile service providers are also slashing service taxes to make the calls more cheaper, making

the market more open to competition.
