

## TireSocks Offers Protective Covers for Scissor Lift Wheels

*Construction sites often use a scissor lift to conduct inspections as construction is being finished. TireSocks Inc. offers surface protection products that cover the wheels preventing scratches or scrapes of a finished floor at a construction site.*

**Dec. 23, 2008** - [PRLog](#) -- Centennial, Colorado, – A scissor lift is a common sight in a construction area, particularly as a job is being completed. It is used to conduct inspection of high areas or to complete any work in areas that are hard to access from the ground. While these last minute details are important, many times the floor at the construction site is already finished and needs to be protected from scrapes, damage and stains from fluids. TireSocks has a full line of surface protection products that will protect finished floors and insure that the job can be kept moving right along.

TireSocks' main product is TireSocks. These are protective fabric covers for the wheels and tires of construction equipment such as the scissor lift that will prevent any scuffing or scratching of the floor. These fit snugly around the wheel making sure no rubber meets the floor. You can operate equipment safely without any tire damage to a floor that has already been finished.

TireSocks also makes Drip Diapers which protect finished floors from fluid leakage and grease stains that can be caused by equipment such as a scissor lift. SafetyPads are another product designed to protect equipment from point of contact damage. All three of these products represent the commitment TireSocks has to the construction industry and the excellent understanding it has of the industry's needs. These products are well-known and well utilized throughout the industry and are distributed nationwide for better safety and surface protection at constructions sites big and small.

For additional information, visit <http://www.TireSocks.com> or call (720) 323-0208.

About TireSocks, Inc. – TireSocks, Inc. offers a full line of protective and safety accessories for the construction and transportation industries. They specialize in surface protection and are staffed by people who know the construction business and its needs.
