

SmartLipo Triplex - A Device with High Definition Sculpting Capabilities

Dr Spero Theodorou and Dr Christopher Chia announce the arrival of a new and improved body sculpting liposuction modality, namely SmartLipo Triplex.

Nov. 6, 2009 - [PRLog](#) -- bodySCULPT, Manhattan, NY - Dr Theodorou and Dr Chia are the first doctors in Manhattan to test this state of the art liposuction device for high definition bodysculpting in Manhattan, New York City. Both plastic surgeons were closely involved in the research and development process for the new SmartLipo Triplex and are the first to put to use its unique body sculpting capabilities. Abdominal Laser etching (six pack), increased muscular show and high definition body contouring are now available at their state of the art AAAASF certified facility on Central Park South in Manhattan, New York City.

SmartLipo Triplex with Expanded Clinical Capabilities

Cynosure, Inc., the manufacturer of the SmartLipo device, has now introduced a new piece of equipment in the field of laser body sculpting. Featuring expanded clinical capabilities, the SmartLipo Triplex is the first laser lipolysis workstation that combines the benefits of three laser wavelengths with the unique patented MultiPlex technology.

The new SmartLipo Triplex integrates a 1440 nm wavelength to the SmartLipo MPX (dual wavelength laser lipolysis system). Combining superior mix of energy levels and wavelengths of 1440, 1064 and 1320 nm, SmartLipo Triplex delivers higher absorption of fatty tissue with the same powerful tissue coagulation and skin tightening effect. The 1064nm and 1320nm wavelengths perform different functions and work better in combination to deliver unmatched tissue tightening through tissue coagulation.

Safe and Reliable Procedure Delivering Optimal Results

SmartLipo Triplex comes equipped with SmartSense and ThermaGuide features to provide reliable, controlled energy delivery. The laser liposuction procedure using SmartLipo Triplex can effectively address all your patient's body contouring concerns – all with less downtime and risks. Moreover, it is fast, safe, and reliable, and causes no thermal damage. This innovative and minimally invasive procedure is typically performed under local anesthesia, on an outpatient basis. Most people are able to return to normal activities in a couple of days.

The multiplex triple wavelengths, expanded clinical capabilities to deliver accurate results are the reasons which make the device truly unique. For more information regarding SmartLipo MPX Triplex, please visit our website www.bodysculpt.com.
